PROFILE

Computer Science Honours candidate and BSc Information Technology graduate with hands-on experience delivering full-stack applications, networked software and enterprise technology initiatives. Strong in translating requirements into working software and taking ownership of important technical components. Repeatedly entrusted with leadership responsibilities in academic teams, including leading networking and software work and presenting technical solutions to lecturers. Seeking software engineering internships and graduate programmes where I can contribute as a hands-on developer while developing into a high-impact engineering professional.

EDUCATION

BSc Honours in Computer Science — University of Pretoria | 2026–Present

Relevant coursework: Information Security, Software Engineering, Natural Language Processing, AI, Data Mining

BSc Information Technology — North-West University | 2022–2025

Relevant coursework: Advanced Databases, Data Analytics, Data Structures & Algorithms, OOP, UI Programming, IT Developments

PROFESSIONAL EXPERIENCE

Business Analysis Trainee (Vacation Work) — FNB South Africa | July 2025

- Embedded in the Search & Bots team within FNB's InterfaceX Business Unit, contributing to a live AI initiative focused on automating search tag generation in the banking application.
- Investigated and proposed an AI-driven technical solution, translating a complex business problem into a structured recommendation presented to senior stakeholders.
- Produced and delivered a formal presentation covering research findings, technical approach and projected business impact, gaining exposure to enterprise Agile delivery and stakeholder communication.

SELECTED PROJECTS & LEADERSHIP

Computer Networks & Text Messaging Application — Team Lead | Cisco Packet Tracer, Networking, C#, Windows Forms, Sockets

- Led the networking component of a two-part assignment, designing and configuring a small-company network in Cisco Packet Tracer with switches, routers, DHCP, a central server and Internet connectivity.
- Led the second part of the assignment: a C# Windows Forms text-messaging application using sockets to enable communication between devices on the same network.
- Presented the completed work to the lecturer as the team's representative; the assignment received 100%, demonstrating technical ownership, communication and team leadership.

FIT@NWU Gym Management System — Student Homepage Module | React, Node.js, REST APIs, MySQL

- Led part of the development team before the project structure was consolidated under a main lead, while taking independent ownership of the student-facing module.
- Designed and built the student homepage/dashboard end-to-end, including React UI, backend API integration and interaction with the shared SQL database.
- The wider project achieved 86%, demonstrating delivery within a collaborative software engineering environment.

UML-Based Software Design & Implementation | Java, OOP, UML, Design Patterns

- Applied object-oriented design, UML specifications, design patterns and software architecture principles to translate system requirements into a working Java implementation.
- Worked across requirements representation, architecture and implementation, strengthening software design fundamentals relevant to graduate engineering roles.

Artist Website & Virtual CV | HTML, CSS, JavaScript, React, Vercel

- Built and deployed client/personal web experiences, demonstrating independent frontend development, responsive design and end-to-end delivery.

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, C#

Software Engineering: React, Node.js, FastAPI, .NET, REST APIs, OOP, Design Patterns, UML, Software Architecture, Git

Unathi Kevin Mbolongwe | Graduate Candidate

Databases: SQL, PostgreSQL, SQLite, MySQL, MongoDB Atlas

Development Practices: Agile, SDLC, API Integration, Team Leadership, Technical Presentation, Problem-Solving
